

6th Class Optional Weekly Project

18th - 22nd January 2021

Theme: Space Project

Where to begin?

First thing you need to do is decide what you are going to research and base your project on.

The following are all valid options:

- Our Solar System
- A Planet
- Famous Astronauts (Neil Armstrong, Buzz Aldrin, Michael Collins, Tim Peake, Valentina Tereshkova etc.)
- NASA/ESA
- Missions to the Moon (Apollo)
- The Space Race
- Space technology

I have a topic – What now?

Now you can get to gathering information – what’s relevant, what’s interesting? Remember a project like this should inform and interest your audience so include a picture or two and plenty of facts in an easy-to-read manner.

I’ve done my research ... am I done?

How will you present your project? Will you:

- Organise a poster of information and pictures? (upload a picture when finished)
- Create a Google slides presentation? (provide a link when finished)
- Write out an essay on your topic in your copy or on a refill pad? (upload a picture when finished)

How do I organise my project?

Make sure your project is clearly laid out and easy to follow. This might take a bit of thinking on your part.

Remember too much information can be as bad as too little so always check you are not going too far off from your topic!

Any final tips?

Absolutely! Make sure:

- You title each section of new information clearly
- Don’t waffle too much
- If writing make sure it is clear and easy to read!
